INTERNAL VENEERED

FIRE DOORS AND DOORSETS

A commitment to provide our customers with a singular sourcing point for all their door-set requirements has prompted the introduction of a new range of fully finished interior doors.

Our aim, for these complementary products, is to exceed your expectations, with regard to style, choice, design capability, price and most crucially, delivery lead times - whatever the nature or size of project you have in mind.

PDS are now able to satisfy the most stringent specifier's demands in respect of security, fire resistance and visible appeal, offering single and double leaf doors with **FD30S and FD60S** ratings and **Secured by Design** apartment entrance sets with a vast choice of veneers, standard and purpose made sizes and factory glazing specifications, all intelligently sourced and designed, in order to comply with the most recent and exacting building regulation requirements with regards to fire resistance and escape, insulation, acoustic performance and mobility access.

PDS: concept, design, manufacture and supply, **within** budget and timescale.

Product overview

In response to the recent upsurge in the demand for new apartments, to satisfy the demand for both more affordable homes, and the appetite for inner City living, PDS have developed a Secured by Design, factory finished, pre hung doorset which observes all the most recent performance and legislative requirements, especially with regard to enhanced security, noise reduction, fire resistance and emergency egress. Featuring standard or made to size 44mm solid core FD30 rated door blades with excellent acoustic properties, in a range of veneered, painted flush, or panel effect finishes, pre hung in sturdy Sapele hardwood frames with integral mobility access thresholds, crash to exit multipoint locking, and concealed hydraulic closers, the PDS apartment doorset is the perfect entrance solution for contemporary dwellings.

Principal Doorset attributes

Low maintenance, high durability, enhanced security.

Fully finished, factory assembled, and ready to install - ensuring precise future performance and significantly reducing site labour costs.

Each doorset individually made to order to precisely suit a specific location.

Choice of traditionally styled panel door appearances or more modern flush veneered and surface routed designs. Complementary book matched overpanels and glazed single and double doors with mobility compliant apertures also available for corridors, storage and communal areas etc.

Fast egress multipoint lock, allowing immediate single action exit from inside whilst maintaining high security from the outside - particularly crucial in dwellings with only one defined exit point.

Available with automatic multipoint locking systems, providing constant high security simply by closing the door - no further intervention required!

Optional Factory prepared, fully controllable, concealed hydraulic door closers - more economical, less inconvenient, and with higher visible appeal than traditional overhead closers

Choice of Document 'M' compliant integral anodised aluminium, low level cills or coordinating timber thresholds

Products fully compliant with Building Regulations Approved Document B (fire resistance) and Document E (sound reduction) achieving respectively: FD30 and up to 31dB Rw, with factory fitted Lorient high performance, fire, smoke and acoustic doorframe perimeter seals.

Excellent thermal performance and draught prevention, provided via the high density door core, adjustable lock keeps, and precisely calculated and factory set, door and frame tolerances.

Choice of door widths up to 1000mm. 54mm doors also available with further enhanced acoustic and thermal insulation properties.

All PDS doorsets have factory fitted, attack resistant cylinder protection as standard - eliminating a potential security weakness, which is often present in other composite and PVCu doorsets.

PDS: concept, design, manufacturing and supply within budget and timescale
